Vantage® Manual Spray Gun System

Sophisticated, Yet Easy-to-Use Control Unit

Proven Performance and Reliability

The Vantage manual spray gun is lightweight, compact, yet exceptionally rugged and reliable, to provide optimum operator comfort and control, while withstanding tough conditions in a typical powder coating production environment.

Available as a wallmount unit, feed from the box or fluidised hopper configuration to suit all requirements.

The Vantage control unit combines performance features and technology with an easy-to-use operator interface for optimum coating performance over a broad range of application challenges.

- Familiar pneumatic regulators and gauges enable easy adjustment of operating air pressures.
- Long-life, touch-key controls and LED displays for easy adjustment of both gun voltage and micro-amp current limit.
- Real-time monitoring of voltage or current feedback.
- Automatic feedback control (AFC) maintains the gun current at an optimal level regardless of gun to part distance
